

Care instructions

## Outdoor Kalanchoe

### Watering

Outdoor Kalanchoe should be watered sparingly; slight drying between waterings is ideal.

### Placement

Outdoor Kalanchoe require minimal care and can withstand all variations of the Danish summer weather. The plants thrive in direct sunlight, shade, wind, and rain. However, they will not survive in cold weather and thrive best at temperatures above +10°C.

We recommend planting the flowers close together, as they do not spread.
